

ANZ Fileactive Connection types

ANZ Fileactive

ANZ Fileactive is a host-to-host integration solution that enables secure, automated information exchange between your systems and ANZ.

Connection types:

- Hybrid
- Straight Through Processing (STP)

ANZ Fileactive enables secure, automated information exchange to support payment, reporting and workflow processes.

Hybrid

Payment files are sent from your system via ANZ Fileactive

Payments are available for review and approval in ANZ Transactive Global.

Approved payments are then processed by ANZ.

This suits organisations that require visibility and manual controls.

Straight Through Processing (STP)

Payment and reporting data is securely exchanged between your systems and ANZ.

Information is transmitted automatically via ANZ Fileactive.

Connectivity can be via file-based exchange or API messaging.

This suits organisations seeking end-to-end automation and operational efficiency.

ANZ Fileactive – controls and visibility

Reply files provide status and exception information.

Systems can automatically reconcile transactions.

File validations and duplicate checks help maintain data integrity.

Audit trails support governance and oversight.

ANZ Fileactive enables organisations to automate payment and reporting processes with confidence.
